

# EYFS Addition

<p><b>Key Language</b></p>	<p>add, addend, addition, more, make, sum, total, altogether, double, one more, two more, ten more, equals, is equal to, is the same as, number bonds/pairs/facts, partition, value, worth, place value, ones, tens, count on</p>
<p><b>Early Learning Goals (all Mathematics)</b></p>	<p><b>Number</b></p> <ul style="list-style-type: none"> <li>• Have a deep understanding of number to 10, including the composition of each number</li> <li>• Subitise (recognise quantities without counting) up to 5</li> <li>• Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some number bonds to 10, including double facts.</li> </ul> <p><b>Numerical Patterns</b></p> <ul style="list-style-type: none"> <li>• Verbally count beyond 20, recognising the pattern of the counting system</li> <li>• Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity</li> <li>• Explore and represent patterns within numbers up to 10, including evens and odds, double facts and how quantities can be distributed equally</li> </ul>
<p><b>Representations to support mental and written calculations</b></p>	 <p>The image shows several visual aids for early mathematics:</p> <ul style="list-style-type: none"> <li>Two number lines: the first has 7 red dots labeled 1-7; the second has 3 red dots labeled 1-3 with a bracket above them, followed by 4 red dots labeled 4-7.</li> <li>Two hands: the first has fingers numbered 1-5; the second has fingers numbered 1-5 with a bracket above the first three fingers.</li> <li>A ten frame: a 2x5 grid with 3 blue dots in the top row and 2 red dots in the bottom row.</li> <li>A row of 10 objects: 5 red corn cobs followed by 5 yellow corn cobs.</li> <li>A row of 10 dots: 5 red dots followed by 5 yellow dots.</li> </ul>
<p><b>Stem sentences</b></p>	<p>.... is ....more than ....          You need ... more to make ....          There are .... and .....</p> <p>.... is equal to .... plus ....          .... plus .... is equal to ....</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• The one-one principle – children assign one number name to each object that is being counted. Encourage children to line up objects and say the number name as they touch them.</li> <li>• Stable-order principle – children understand that when counting, the numbers need to be said in a certain order. Encourage children to count aloud to larger numbers first before counting actual objects to higher numbers.</li> <li>• Cardinal principle – children understand that the 1 number name assigned to the final object in a group, is the total number of objects in the group.</li> <li>• Abstraction – anything can be counted (not just objects) e.g. claps, clicks, jumps. Encourage children to visualise objects in their head.</li> </ul>

	<ul style="list-style-type: none"> <li>• Order-irrelevance principle – the order we count objects in is irrelevant. There is still the same number. Encourage children to count from top-bottom, right-left and in reverse. Move objects and ask them to count again.</li> <li>• Encourage children to reason and problem solve e.g. How many objects are there in total if 5 are hidden?</li> <li>• Integrate Maths into routines throughout the day, through stories, rhymes etc</li> <li>• Encourage children to use manipulatives and ensure children understand the link between them and the mathematical ideas they represent.</li> </ul>
<p><b>Early Years Framework Guidance (all Mathematics)</b></p>	<ul style="list-style-type: none"> <li>• Count confidently to 10</li> <li>• Develop a deep understanding of numbers to 10, the relationships between those numbers and the relationships within those numbers</li> <li>• Children should use manipulatives to develop a secure base of knowledge and vocabulary</li> <li>• Children develop their spatial reasoning skills</li> <li>• Children look for patterns and relationships and spot connections</li> </ul>

<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• addend + addend = sum</li> <li>• When adding numbers to 10, children can explore both aggregation and augmentation.</li> <li>• The part-whole model, discrete and continuous bar model, number shapes and ten frame support aggregation.</li> <li>• The combination bar model, ten frame, bead string and number track all support augmentation.</li> <li>• When adding one-digit numbers that cross 10, it is important to highlight the importance of ten ones equalling one ten.</li> <li>• Different manipulatives can be used to represent this exchange. Use concrete resources alongside number lines to support children in understanding how to partition their jumps.</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Compare, describe, and solve practical problems for lengths and heights, mass and weight, capacity and volume, time</li> <li>• Sequence events in chronological order</li> </ul>

# Year 2 Addition

## Key Language

add, addend, addition, more, plus, make, sum, total, altogether, double, near double, one more, two more, equals, is equal to, is the same as, number bonds/pairs/facts, column, partition, value, worth, place value, ones, tens hundreds

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- Solve problems with addition using concrete objects and pictorial representations, including those involving numbers, quantities and measures
- Apply increasing knowledge of mental methods
- Recall and use addition facts to 20 fluently, and derive and use related facts up to 100
- Add numbers using concrete objects, pictorial representations and mentally including: a two-digit number and ones; a two-digit number and tens; two two-digit numbers; adding three one-digit numbers
- Apply increasing knowledge of written methods
- Show that addition of two numbers can be done in any order (commutative)
- Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems
- Pupils practise addition to 20 to become increasingly fluent in deriving facts such as  $3 + 7 = 10$ , to calculate  $30 + 70 = 100$*
- They check their calculations, including by adding to check subtraction and adding numbers in a different order to check addition.*
- Recording addition in columns supports place value and prepares for formal written methods with larger numbers.*

### Common mental calculation strategies:

Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging through ten, hundred  
 Complementary addition

## Representations to support mental and written calculations

The image displays various mathematical representations for addition:

- Concrete Objects:** Top left shows colored blocks representing numbers. Top right shows bundles of sticks representing tens and ones.
- Number Bonds:** A tree diagram showing 16 composed of 7, 6, and 3.
- Equation:**  $7 + 6 + 3 = 16$  is shown in a box and on a number line from 35 to 50, with jumps of 7, 6, and 3 starting from 38.
- Ten Frames:** Two ten frames showing the addition of 7, 6, and 3. The first frame has 7 red, 6 yellow, and 3 green dots. The second frame has 10 red, 6 yellow, and 3 green dots.
- Place Value Grids:** Two grids labeled 'Tens' and 'Ones'. The first shows 2 tens and 3 ones. The second shows 5 tens and 7 ones, with a red arrow indicating the transfer of 3 ones from the ones column to the tens column.
- Columnar Addition:**
  - $58 + 43:$ 

$$\begin{array}{r} 50 + 8 \\ 40 + 3 \\ \hline 90 + 11 \\ = 101 \end{array}$$
  - $23 + 34:$ 

$$\begin{array}{r} 20 + 3 \\ + 30 + 4 \\ \hline 50 + 7 \\ = 57 \end{array}$$
  - $63 + 16:$ 

$$\begin{array}{r} 63 + 10 \\ + 6 \\ \hline 73 + 6 \\ = 79 \end{array}$$

<p><b>Stem sentences</b></p>	<p>.... is ....more than ....          You need ... more to make ....          There are .... and .....</p> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>If the column sum is equal to 10 or more, we must regroup.</p> <p>If the column sum is equal to 100 or more, we must regroup.</p> </div> <p>We can write this as .... plus ....          The ..... represents the ....          ..... is equal to .... plus ....          ..... plus .... Is equal to ....          .... and .... are addends. .... is the sum          We line up the ones: 2 ones plus 5 ones equals 7 ones          We line up the tens: 3 tens and 4 tens equals 7 tens          7 ones plus 5 ones is equal to 12 ones          I regroup 12 ones into 1 ten and 2 ones and place the 10 in the tens column</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• addend + addend = sum</li> <li>• Use empty number lines, concrete equipment, hundred squares etc. to build confidence and fluency in mental addition skills</li> <li>• Add pairs of two-digit numbers, moving to the partitioned column method when secure adding tens and ones. Only provide examples that do not cross the tens boundary until they are secure with the method itself.</li> <li>• Once children can add a multiple of ten to a two=digit number mentally (e.g. 80 +11) they are ready for adding pairs of two-digit numbers that <b>do</b> cross the tens boundary (e.g. 58 +43).</li> <li>• When adding three one-digit numbers, children should be encouraged to look for number bonds to 10 or doubles to add the numbers more efficiently. This supports their understanding of commutativity.</li> <li>• Manipulatives that highlight number bonds to 10 are effective whe adding three one-digit numbers.</li> <li>• When adding single digits to a two-digit number, children should be encouraged to count on from the larger number</li> <li>• They should also apply their knowledge of number bonds to add more efficiently e.g. <math>8 + 5 = 13</math> so <math>38 + 5 = 43</math></li> <li>• At this stage, encourage children to use the formal column method when calculating alongside straws, Base 10 or place value counters. As numbers become larger, straws become less efficient.</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• <i>Pupils should count in fractions up to 10, starting from any number and using the <math>\frac{1}{2}</math> and <math>\frac{2}{4}</math> equivalence on the number line. This reinforces the concept of fractions as numbers and that they can add up to more than one.</i></li> <li>• Find different combinations of coins that equal the same amounts of money</li> <li>• Solve simple problems in a practical context involving addition of money of the same unit</li> <li>• Ask and answer simple questions in statistics</li> </ul>

# Year 3 Addition

## Key Language

add, addend, addition, more, plus, make, sum, total, altogether, double, near double, one more, two more, equals, is equal to, is the same as, number bonds/pairs/facts, column, partition, value, worth, place value, ones, tens, hundreds

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- add numbers including
  - a three-digit number and ones
  - a three-digit number and tens
  - a three-digit number and hundreds
- estimate the answer to a calculation and use inverse operations to check answers
- solve problems, including missing number problems, using number facts, place value, and more complex addition
- add numbers with up to three digits, using formal written methods of columnar addition
- *Pupils practise solving varied addition and subtraction questions. For mental calculations with two-digit numbers, the answers could exceed 100*
- *Pupils use their understanding of place value and partitioning, and practise using columnar addition with increasingly large numbers up to three digits to become fluent*

### Common mental calculation strategies:

Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging through ten, hundred  
 Complementary addition

## Representations to support mental and written calculations

The image shows several mathematical representations:

- Place Value Charts:** Two charts showing the decomposition of 265 and 164 into hundreds, tens, and ones. The first chart uses blue blocks, and the second uses colored beads.
- Number Bonds:** A number bond diagram showing 265 and 164 with a question mark in the middle, representing the sum.
- Straw Bundles:** Bundles of yellow straws representing 200, 30, and 4, with the equation  $200 + 30 + 4 = 236$ .
- Columnar Addition:** Several examples of columnar addition, including  $236 + 73 = 309$  and  $384 + 237 = 621$ .
- Other Methods:** A method using bundles of straws to represent  $42 + 31 = 73$ , and a method using a grid to represent  $200 + 30 + 4 = 236$ .

## Stem sentences

.... is ....more than ....  
 You need ... more to make ....  
 There are .... and ....  
 We can write this as .... plus ....  
 The .... represents the ....  
 .... is equal to .... plus ....  
 .... plus .... Is equal to ....  
 .... and .... are addends. .... is the sum

If the column sum is equal to 10 or more, we must regroup.

If the column sum is equal to 100 or more, we must regroup.

<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• addend + addend = sum</li> <li>• Encourage children to use formal column method when calculating, alongside concrete and pictorial representations</li> <li>• Children can also use a number line to count on to find the total. Encourage them to jump in multiples of tens and hundreds to become more efficient.</li> <li>• Base 10 and place value counters are the most efficient manipulatives when adding 3-digit numbers.</li> <li>• Ensure calculations are written alongside any manipulatives to make links</li> <li>• Add ones, then tens, then hundreds in this order.</li> <li>• Ensure that when using column method, you state '<i>three tens add seven tens</i>', not '3 add 7', which equals '<i>ten tens or one hundred</i>' to preserve place value understanding.</li> <li>• Ensure that children position the digits correctly in columns to preserve place value.</li> <li>• Children should first add without an exchange before moving onto addition with exchange.</li> <li>• At this stage, encourage children to use the formal column method when calculating alongside Base 10 or place value counters.</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Solve number problems and practical problems involving number and place value</li> <li>• find 10 or 100 more than a given number</li> <li>• <i>use partitioning relating to place value using varied and increasingly complex problems e.g. <math>146 = 100 + 40 + 6</math>, <math>146 = 130 + 16</math></i></li> <li>• add fractions with the same denominator within one whole</li> <li>• add lengths, (m/cm/mm), mass (g/kg) and volume/capacity (l/ml)</li> <li>• add amounts of money to give change, using both £ and p in practical contexts</li> <li>• <i>Pupils continue to become fluent in recognising the value of coins by adding amounts, including mixed units, and giving change using manageable amounts</i></li> <li>• solve one-step and two-step questions (e.g. How many more?) Using information presented in scaled bar charts and pictograms and tables</li> </ul>

# Year 4 Addition

## Key Language

add, addend, addition, more, plus, make, sum, total, altogether, double, near double, one more, two more, equals, is equal to, is the same as, number bonds/pairs/facts, column, partition, value, worth, place value, ones, tens hundreds, thousand, ten thousand, hundred thousand, million

## NC requirements: Mental calculations and written calculations (non-statutory guidance in italics)

- Add numbers with up to 4 digits using the formal written method of columnar addition where appropriate
- Estimate and use inverse operations to check answers to a calculation
- Solve addition two-step problems in contexts
- *Pupils continue to practise mental methods with increasingly larger numbers to aid fluency*

**Common mental calculation strategies:**  
 Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging through ten, hundred  
 Complementary addition

## Representations to support mental and written calculations

$\frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = 1$

$767 + 216 =$

$700 + 60 + 7$   
 $200 + 10 + 6$

$1,378 + 2,148 = 3,526$

Thousands	Hundreds	Tens	Ones
1	3	7	8
2	1	4	8
3	5	2	6

Thousands	Hundreds	Tens	Ones
£1	2	3	2
£1	1	8	1
£2	4	1	3

## Stem sentences

.... is ....more than ....  
 You need ... more to make ....  
 There are .... and ....  
 We can write this as .... plus ....  
 The .... represents the ....  
 .... is equal to .... plus ....  
 .... plus .... Is equal to ....  
 ... and ... are addends. .... is the sum

If the column sum is equal to 10 or more, we must regroup.

If the column sum is equal to 100 or more, we must regroup.

<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• addend + addend = sum</li> <li>• Encourage children to use formal column method when calculating, alongside concrete and pictorial representations</li> <li>• Children can also use a number line to count on to find the total. Encourage them to jump in multiples of tens and hundreds to become more efficient.</li> <li>• Base 10 and place value counters are the most efficient manipulatives when numbers with up to 4 digits.</li> <li>• Ensure calculations are written alongside any manipulatives to make links</li> <li>• Plain counters on a place value grid can also be used to support learning</li> <li>• Add ones, then tens, then hundreds in this order.</li> <li>• Ensure that when using column method, you state '<i>three hundreds add seven hundreds</i>', not '3 add 7', which equals '<i>ten hundreds or one thousand</i>' to preserve place value understanding.</li> <li>• Ensure that children position the digits correctly in columns to preserve place value.</li> <li>• Children should first add without an exchange before moving onto addition with exchange.</li> <li>• Children should first be confident with the expanded column addition before moving onto the compact method</li> <li>• Values are exchanged below the equals lines in column addition (see diagram)</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Find 1000 more than a given number</li> <li>• Round any number to the nearest 10, 100 or 1000</li> <li>• Solve number and practical problems with increasingly large positive numbers</li> <li>• <i>Counting in tens and hundreds and other multiples</i></li> <li>• Add fractions with the same denominator</li> <li>• Pupils add fractions with the same denominator</li> <li>• Counting forwards in simple fractions and decimals</li> <li>• Find the area of rectilinear shapes by counting squares</li> <li>• Calculate different measures including money in pounds and pence</li> <li>• Solve comparison and sum problems using information presented in bar charts, pictograms, tables and other graphs</li> </ul>

# Year 5 Addition

## Key Language

add, addend, addition, more, plus, make, sum, total, altogether, double, near double, one more, two more, equals, is equal to, is the same as, number bonds/pairs/facts, column, partition, value, worth, place value, ones, tens, hundreds, thousand, ten thousand, hundred thousand, million, decimals, decimal point, tenth, hundredth

## NC requirements: Mental calculations and written calculations (non-statutory guidance in italics)

- Count forwards in steps of powers of 10, for any given number up to 1 000 000
- Count forwards with positive and negative whole numbers, including through zero
- Add numbers mentally with increasingly large numbers
- Solve number problems and practical problems involving numbers to 1,000 000, decimal and negative numbers
- Add whole numbers with more than 4 digits, including using formal written methods
- Solve addition multi-step problems in context, deciding which operations and methods to use and why
- Solve problems involving addition and other operations, including understanding of the meaning of the equals sign
- *Pupils practise using the formal written method of columnar addition with increasingly large numbers to aid fluency.*
- *They practise mental calculations with increasingly large numbers to aid fluency.*

## Representations to support mental and written calculations

$$104,328 + 61,731 = 166,059$$

$$3.65 + 2.41 = 6.06$$

### Common mental calculation strategies:

- Partitioning and recombining
- Doubles and near doubles
- Use number pairs to 10 and 100
- Adding near multiples of ten and adjusting
- Using patterns of similar calculations
- Using known number facts
- Bridging through ten, hundred
- Complementary addition

<p><b>Stem sentences</b></p>	<p>.... is ....more than ....          You need ... more to make .... This includes putting this into context when adding money and other measures</li> <li>• Ensure calculations are written alongside any manipulatives to make links</li> <li>• Ensure that when using column method, you state '<i>three tens add seven tens</i>', not '3 add 7', which equals '<i>ten tens or one hundred</i>' to preserve place value understanding.</li> <li>• Ensure when adding decimals, you state '6 tenths add 7 tenths' to reinforce place value</li> <li>• Empty decimal places can be filled with a zero to converse place value in the column</li> <li>• Ensure that children position the digits correctly in columns to preserve place value.</li> <li>• The decimal point should be aligned in the same way as the other place value columns, and must be the in the same column as the answer</li> <li>• At this stage, children should be encouraged to work in the abstract, using the column method to add larger numbers efficiently</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Count forwards in steps of powers of 10, for any given number up to 1 000 000</li> <li>• Count forwards with positive and negative whole numbers, including through zero</li> <li>• Round up any number up to 1 000 000 to the nearest 10, 100, 1000, 10 000 and 100 000</li> <li>• Solve number problems and practical problems involving numbers up to 1 000 000, decimal and negative numbers</li> <li>• <i>They should recognise and describe linear number sequences, including those involving fractions and decimals, and find the term-to-term rule</i></li> <li>• Solve problems using addition and other operations, including the meaning of the equals sign</li> <li>• <i>Distributivity can be expressed as <math>a(b + c) = ab + ac</math></i></li> <li>• Add fractions with the same denominator and denominators that are multiples of the same number</li> <li>• Round decimals with two decimal places to the nearest whole number and to one decimal value</li> <li>• Solve problems involving number up to three decimal places</li> <li>• <i>Pupils practise adding fractions to become fluent through a variety of increasingly complex problems. They extend their understanding of adding fractions to calculations that exceed 1 as a mixed number</i></li> </ul>

- |  |   |
|--|---|
|  | <ul style="list-style-type: none"><li>• <i>Pupils continue to practise counting forwards in simple fractions</i></li><li>• <i>Pupils extend counting from Year 4, using decimals and fractions including bridging zero, for example on a number line</i></li><li>• <i>Mentally add and subtract tenths, and one-digit whole numbers and tenths</i></li><li>• <i>They practise adding decimals, including a mix of whole numbers and decimals, decimals with different numbers of decimal places, and complements of 1 (e.g. <math>0.83 + 0.17 = 1</math>)</i></li><li>• <i>Measure and calculate the perimeter of composite rectilinear shapes in centimetres and metres</i></li><li>• <i>Use addition to solve measures involving measure using decimal notation, including scaling</i></li><li>• <i>Calculate perimeter of rectangles and related composite shapes. Missing measures can be expressed algebraically, e.g. <math>4 + 2b = 20</math></i></li><li>• <i>Pupils use addition in problems involving time and money</i></li><li>• <i>Use the properties of rectangles to deduce related facts and find missing lengths and angles</i></li><li>• <i>Solve comparison, sum and difference problems using information presented in a line graph</i></li></ul> |
|--|---|

# Year 6 Addition

## Key Language

add, addend, addition, more, plus, make, sum, total, altogether, double, near double, one more, two more, equals, is equal to, is the same as, number bonds/pairs/facts, column, partition, value, worth, place value, ones, tens, hundreds, thousand, ten thousand, hundred thousand, million, decimals, decimal point, tenth, hundredth

## NC requirements: Mental calculations and written calculations (non-statutory guidance in italics)

- Perform mental calculations, including with mixed operations and large numbers
- Use their knowledge of the order of operations to carry out calculations involving the four operations
- Solve addition and subtraction multi-step problems in context s, deciding which operations and methods to use and why
- Solve problems using all four operations
- Use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy
- *Pupils practise addition for larger numbers, using the formal written method of columnar addition*
- *Pupils rounds answers to a specified degree of accuracy, e.g. to the nearest 10, 20. 50 etc. but not to a specified number of significant figures*
- *Pupils explore the order of operations using brackets*

## Representations to support mental and written calculations

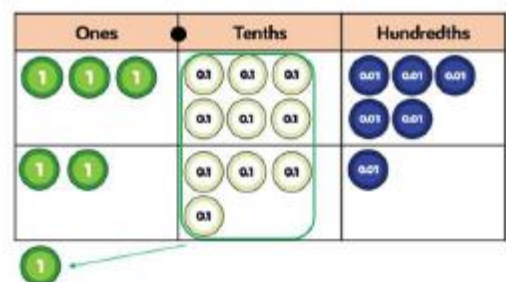

$$104,328 + 61,731 = 166,059$$

**Common mental calculation strategies:**  
 Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging though ten, hundred  
 Complementary addition

$$3.65 + 2.41 = 6.06$$

# EYFS Subtraction

<p><b>Key Language</b></p>	<p>take away, one less, two less, ten less..., fewer, difference, difference between, minus, subtract, left, less than, fewer, smaller, fewest, smallest, least, decrease, part, whole</p>
<p><b>Early Learning Goals (all Mathematics)</b></p>	<p><b>Number</b></p> <ul style="list-style-type: none"> <li>• Have a deep understanding of number to 10, including the composition of each number</li> <li>• Subitise (recognise quantities without counting) up to 5</li> <li>• Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some number bonds to 10, including double facts.</li> </ul> <p><b>Numerical Patterns</b></p> <ul style="list-style-type: none"> <li>• Verbally count beyond 20, recognising the pattern of the counting system</li> <li>• Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity</li> <li>• Explore and represent patterns within numbers up to 10, including evens and odds, double facts and how quantities can be distributed equally</li> </ul>
<p><b>Representations to support mental and written calculations</b></p>	
<p><b>Stem sentences</b></p>	<p>.....are left          .....have gone          ...is...fewer than...          ...is ...less than ...          First...then...now          ....minus....equals ....          Count back... from ....          The difference between .. and ... is ...          .....are left over          .....more to make....</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• Conservation (of number) – the concept that the number stays the same if none have been added or taken away</li> <li>• Counting back – children may find this harder because of the demands on working memory</li> <li>• Compare groups of objects – which groups have fewer/more – note that this is the number of objects, not the size of the objects</li> <li>• Reason about why some groups are unequal using more/less</li> </ul>

	<ul style="list-style-type: none"> <li>• Converting unequal groups to equal by taking some from one group</li> <li>• Compare numbers that are far apart, near to and next to each other on a number line</li> <li>• Knowing the one more/one less relationship between counting numbers e.g. relabel a box that contains 5 with the digit 4</li> <li>• Making predictions about what will happen in stories/songs if one is taken away</li> <li>• Part-whole – identifying smaller numbers within a number</li> <li>• Inverse operations e.g. Five Currant Buns – the whole is still 5 but some are in the shop and some have been taken away</li> <li>• Partitioning a number into different pairs/more than one number e.g. 10 is 3,6 and 1</li> <li>• Hiding objects to partition the numbers in part-whole models</li> <li>• Recognising attributes in measures e.g. smaller, shorter, lighter, not enough</li> <li>• Comparing e.g. packing a shopping bag with lighter items at the top</li> <li>• Experiencing specific time durations e.g. count down timer</li> </ul>
<p><b>Early Years Framework Guidance (all Mathematics)</b></p>	<ul style="list-style-type: none"> <li>• Count confidently to 10</li> <li>• Develop a deep understanding of numbers to 10, the relationships between those numbers and the relationships within those numbers</li> <li>• Children should use manipulatives to develop a secure base of knowledge and vocabulary</li> <li>• Children develop their spatial reasoning skills</li> <li>• Children look for patterns and relationships and spot connections</li> </ul>

# Year 1 Subtraction

## Key Language

minus, subtract, take away, left, less than, difference, fewer, decrease, part, whole, equal to, partition, value, worth, ones, tens, minuend, subtrahend, half, halve, subtract, number bonds/pairs

## Mental and written calculations

- Count to and across 100, backwards, beginning with 0 or 1, or from any given number
- Given a number, identify one less
- Identify and represent numbers using objects and pictorial representations including the number line, and use the language of equal to, less than (fewer), least
- Read and interpret mathematical statements involving subtraction and equals signs
- Represent and use number bonds and related subtraction facts within 20
- Subtract one-digit and two-digit numbers to 20, including 0
- Solve one-step and two-step problems that involve subtraction using concrete objects and pictorial representations and missing number problems such as  $7 = \underline{\quad} - 9$
- *Pupils memorise and reason with number bonds to 10 and 20 in several forms (for example  $9 + 7 = 16$ ;  $16 - 7 = 9$ ;  $7 = 16 - 9$ ). They should realise the effect of adding or subtracting zero. This establishes addition and subtraction as related operations.*
- *They discuss and solve problems in familiar practical contexts, including using quantities. Problems should include the terms take away, distance between, difference between, less than, so that pupils develop the concept of subtraction and are enabled to use this operation flexibly.*

**Common mental calculation strategies:**  
 Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging through ten, hundred  
 Complementary addition

## Representations to support mental and written calculations

## Stem sentences

.....are left  
 .....have gone

 ....is ....less than ....  
 First...then...now  
 ....minus....equals ....  
 Count back... from ....

	<p>The difference between .. and ... is ...</p> <p>I use my knowledge of number bonds to 10 to calculate 10 minus ....</p>
<b>Teaching guidance</b>	<ul style="list-style-type: none"> <li>• minuend – subtrahend = difference</li> <li>• Part-whole models, ten frames and number shapes support partitioning</li> <li>• Ten frames, number tracks, single bar models and bead strings support reduction</li> <li>• Cubes and bar models with two bars can support finding the difference</li> <li>• When subtracting one-digit numbers that cross 10, it is important to highlight the importance of ten ones equalling one ten</li> <li>• Children should be encouraged to find the number bond to 10 when partitioning the subtracted number. Ten frames, number shapes and number lines are particularly useful for this.</li> </ul>
<b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b>	<ul style="list-style-type: none"> <li>• <i>Problems should include the terms distance between, difference between</i></li> <li>• Compare, describe and solve practical problems for lengths and heights, mass/weight, capacity and volume, time</li> <li>• Sequence events in chronological order using language, for example before, yesterday</li> </ul>

# Year 2 Subtraction

## Key Language

minus, subtract, take away, left, less, less than, least, difference, fewer, decrease, part, whole, equal to, partition, column, value, worth, ones, tens, hundreds  
 minuend, subtrahend, half, halve, subtract, number bonds/pairs count back, count backwards, less than, tens boundary, ten less

## NC Mental and written calculations

- Count in steps of 2, 3 and 5 from 0 and in tens from any number backward
- Recall and use subtraction facts to 20 fluently, and derive and use repeated facts up to 100
- Solve problems with subtraction using concrete objects, pictorial representations, and mentally, including a two-digit number and ones, a two-digit number and tens, two two-digit numbers, three one-digit numbers
- Show that subtraction cannot be done in any order
- Recognise and use the inverse relationship between addition and subtraction and use this to check calculation and solve missing number problems
- Extend their understanding of subtraction
- to include difference
- Practise subtraction up to 20 to become increasingly fluent in deriving facts such as  $10 - 7 = 3$  and  $7 = 10 - 3$  to calculate  $100 - 70 = 30$  and  $70 = 100 - 30$
- They can check their calculations by adding to check subtraction
- Apply increasing knowledge of written methods
- Recording subtraction in columns supports place value and prepares for formal written methods with larger numbers

**Common mental calculation strategies:**  
 Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging through ten, hundred  
 Complementary addition

## Representations to support mental and written calculations

## Stem sentences

.....are left  
 .....have gone  
 ...is...fewer than...  
 How many fewer is...than....?  
 How much less is....?  
 First...then...now  
 ....minus....equals ....  
 Count back... from ....

	<p>The difference between .. and ... is ...</p> <p>I use my knowledge of number bonds to 10 to calculate 10 minus ....</p> <p>First I partition ... Then ....minus ... is equal to ...</p> <p>First I subtract the tens....Then I subtract the ones....</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• minuend – subtrahend = difference</li> <li>• Introduce examples where there is no exchanging first</li> <li>• Introduce ‘exchanging’ through practical partitioning</li> <li>• When learning to subtract, explore partitioning in different ways</li> <li>• Children should be encouraged to find the number bond to 10 when partitioning the subtracted number. Ten frames, number shapes and number lines are particularly useful for this.</li> <li>• Once children are secure with subtraction, use an expanded method and then compact</li> <li>• Combine methods with use of a hundred square to reinforce number value and order</li> <li>• Encourage children to use the formal method when calculating alongside straws, Base 10 or place value counters.</li> <li>• Children can also use a blank number line to count on to find the difference. Encourage them to jump in multiples of 10 to become more efficient</li> <li>• On a number line, subtract the tens first, then the ones.</li> <li>• Combine methods with use of a hundred square to reinforce understanding number value and order</li> <li>• Many mental strategies are taught. Children are taught to recognise that when numbers are close together, it is more efficient to count on the difference. They need to be confident about the relationship between addition and subtraction. e.g. Start with the smaller number and count on to the largest.</li> <li>• Teaching children to bridge through ten can help them become more efficient</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• <i>Partition numbers in different ways (for example <math>23 = 20 + 3</math> and <math>23 = 10 + 13</math>) to support subtraction</i></li> <li>• Solve simple problems in a practical context involving subtraction of money of the same unit including giving change</li> <li>• Compare and sequence intervals of time</li> </ul>

# Year 3 Subtraction

## Key Language

minus, subtract, take away, left, less, less than, least, difference, fewer, decrease, part, whole, equal to, partition, column, value, worth, ones, tens, hundreds  
 minuend, subtrahend, half, halve, subtract, number bonds/pairs count back, count backwards, less than, tens boundary, ten less, hundreds boundary, one hundred less

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- Subtract numbers mentally including, a three-digit number and ones, a three-digit number and tens, a three-digit number and hundreds
- Estimate the answer to a calculation and use inverse operations to check answers
- Subtract numbers up with up to three digits, using formal written methods of columnar subtraction
- Solve problems, including missing number problems using more complex subtraction
- *Pupils practise solving various subtraction questions*
- *Practise using columnar subtraction with increasingly large numbers up to three digits to become fluent*

## Representations to support mental and written calculations

**Common mental calculation strategies:**  
 Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging through ten, hundred  
 Complementary addition

## Stem sentences

.....are left  
 .....have gone  
 ...is...fewer than...  
 How many fewer is...than....?  
 How much less is....?  
 First...then...now

	<p>....minus....equals ....</p> <p>Count back... from ....</p> <p>The difference between .. and ... is ...</p> <p>I use my knowledge of number bonds to 10 to calculate 10 minus ....</p> <p>First I partition ... # Year 5 Subtraction

## Key Language

minus, subtract, take away, left, less, less than, least, difference, fewer, decrease, part, whole, equal to, partition, column, value, worth, ones, tens, hundreds, minuend, subtrahend, half, halve, subtract, number bonds/pairs count back, count backwards, less than, tens boundary, ten less, hundreds boundary, one hundred less, thousand, thousands boundary, one thousand less, ten thousand, hundred thousand, million, above/below zero, negative numbers, inverse, less than or equal to, ones boundary, tenths boundary, hundredths, discount

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- Subtract whole numbers with more than 4 digits, including using formal written methods (columnar subtraction)
- Subtract numbers mentally with increasingly large numbers
- Use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy
- Solve subtraction multi-step problems in contexts, deciding which operations and methods to use and why
- *Pupils practise using the formal written method of columnar subtraction with increasingly large numbers to aid fluency*
- *They practise mental calculations with increasingly large numbers to aid fluency for example  $12462 - 2300 = 10162$*

## Representations to support mental and written calculations

**5.43 - 2.7 = 2.73**

$$294,382 - 182,501 = 111,881$$

	2	9	<del>3</del>	13	8	2
-	1	8	2	5	0	1
	1	1	1	8	8	1

### Common mental calculation strategies:

- Partitioning and recombining
- Doubles and near doubles
- Use number pairs to 10 and 100
- Adding near multiples of ten and adjusting
- Using patterns of similar calculations
- Using known number facts
- Bridging through ten, hundred
- Complementary addition

# Year 6 Subtraction

## Key Language

minus, subtract, take away, left, less, less than, least, difference, fewer, decrease, part, whole, equal to, partition, column, value, worth, ones, tens, hundreds, minuend, subtrahend, half, halve, subtract, number bonds/pairs count back, count backwards, less than, tens boundary, ten less, hundreds boundary, one hundred less, thousand, thousands boundary, one thousand less, ten thousand, hundred thousand, million, above/below zero, negative numbers, inverse, less than or equal to, ones boundary, tenths boundary, hundredths, discount, formulae, equation

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- Perform mental calculations, including with mixed operations and large numbers
- Use their knowledge of the order of operations to carry out calculations involving the four operations
- Solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why
- Use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy
- *Pupils practise subtraction for larger numbers, using the formal written method of columnar subtraction*
- *Pupils round answers to a specified degree of accuracy e.g. to the nearest 10, 20, 50 etc. but not to a specified number of significant figures*
- *Pupils explore the order of operations using brackets*

## Representations to support mental and written calculations

**Common mental calculation strategies:**

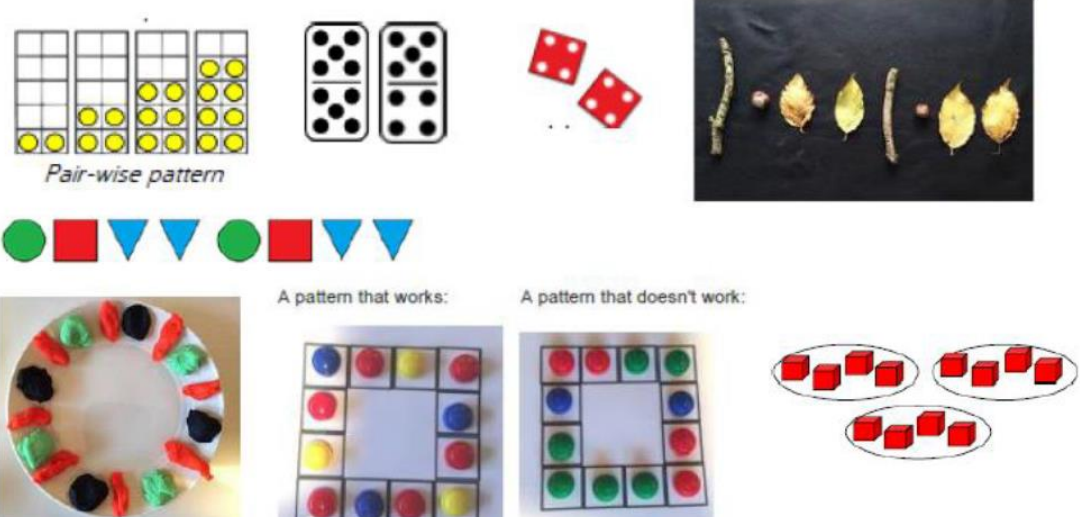

- Partitioning and recombining
- Doubles and near doubles
- Use number pairs to 10 and 100
- Adding near multiples of ten and adjusting
- Using patterns of similar calculations
- Using known number facts
- Bridging though ten, hundred
- Complementary addition

## Stem sentences

This includes putting this into context when subtracting money and other measures</li> <li>• Use a place holder zero in any empty decimal places to aid understanding of what to subtract in that column</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Read, write and order numbers up to 10000 and determine the value of each digit</li> <li>• Round any number to a required degree of accuracy</li> <li>• Use negative numbers in context and calculate intervals across zero</li> <li>• Solve number and practical problems involving numbers up to 10 000 000 and negative numbers</li> <li>• Add and subtract fractions with different denominators and mixed numbers</li> <li>• Solve problems which require answers to be rounded to specific degrees of accuracy</li> <li>• <i>Practise, use and understand the subtraction of fractions with different denominators by identifying equivalent fractions with the same denominator</i></li> <li>• Use simple algebra formulae and equations using symbols and letters</li> <li>• Solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places</li> <li>• Recognise that shapes with the same areas can have different perimeters and vice versa</li> <li>• <i>Using the number line, pupils subtract positive and negative integers for measures such as temperature</i></li> <li>• Find unknown angles in any triangles, quadrilaterals and regular polygons</li> <li>• Calculate and interpret the mean as an average</li> </ul>

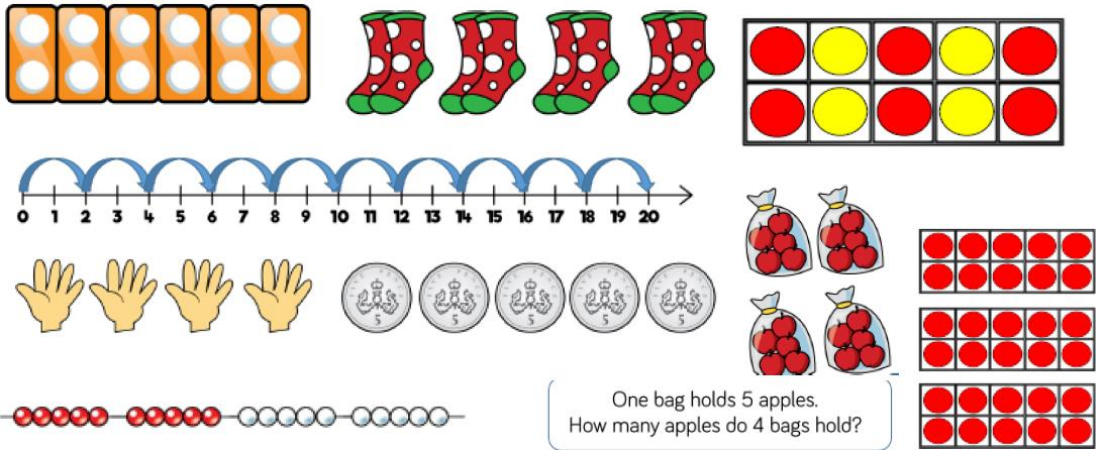

# EYFS Multiplication

<p><b>Key Language</b></p>	<p>sharing, doubling, halving, number patterns, parts of a whole, partition, half, quarter, odd, even</p>
<p><b>Early Learning Goals (all Mathematics)</b></p>	<p><b>Number</b></p> <ul style="list-style-type: none"> <li>• Have a deep understanding of number to 10, including the composition of each number</li> <li>• Subitise (recognise quantities without counting) up to 5</li> <li>• Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some number bonds to 10, including double facts.</li> </ul> <p><b>Numerical Patterns</b></p> <ul style="list-style-type: none"> <li>• Verbally count beyond 20, recognising the pattern of the counting system</li> <li>• Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity</li> <li>• Explore and represent patterns within numbers up to 10, including evens and odds, double facts and how quantities can be distributed equally</li> </ul>
<p><b>Representations to support mental and written calculations</b></p>	 <p>Pair-wise pattern</p> <p>A pattern that works:</p> <p>A pattern that doesn't work:</p>
<p><b>Stem sentences</b></p>	<p>This is a red blue pattern. I call it an A (one of these) then a B (one of those)</p> <p>First _____, then _____, next _____</p> <p>I can continue this pattern with _____</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• Children will learn that double means 'twice as many'</li> <li>• Building doubles using real objects and mathematical equipment e.g. dominoes, dice, Numicon</li> <li>• Mirrors are good ways for children to see doubles and explore early symmetry</li> <li>• Encourage the children to say the doubles as they build them</li> <li>• Provide examples of doubles and non-doubles for the children to sort and explain why</li> <li>• Focus on repeating patterns – AB, ABC, ABB, ABBC</li> <li>• With patterns, children should: continue, copy, make their own, spot errors in a pattern, identify the unit of repeat, continue patterns that end mid-unit</li> <li>• As children become more confident, they can record their patterns. at first, they will be actual representations, but eventually they will become more iconic e.g. red dot for dinosaur or 'R'</li> </ul>

	<ul style="list-style-type: none"> <li>• Encourage children to symbolise patterns in different ways – they pick up on the coding AB, ABC, ABB, ABBC</li> <li>• Encourage children to explain the ‘rules’ of their patterns to friends and that they can follow their own code</li> <li>• Progress to making patterns in circles e.g. on plates, necklaces</li> <li>• Encourage children to predict if their pattern could keep going</li> <li>• Explore patterns in fabric, wallpaper, wrapping paper</li> <li>• Consider extending patterns, e.g. in cross shape, staircase patterns going up in ones or twos</li> <li>• Children may spot spatial patterns e.g. reflecting patterns or in stories</li> </ul>
<p><b>Early Years Framework Guidance (all Mathematics)</b></p>	<ul style="list-style-type: none"> <li>• Count confidently to 10</li> <li>• Develop a deep understanding of numbers to 10, the relationships between those numbers and the relationships within those numbers</li> <li>• Children should use manipulatives to develop a secure base of knowledge and vocabulary</li> <li>• Children develop their spatial reasoning skills</li> <li>• Children look for patterns and relationships and spot connections</li> </ul>

# Year 1 Multiplication

<b>Key Language</b>	groups of, lots of, times, array, altogether, multiply, count, sharing, doubling, halving, number patterns, parts of a whole, partition, half, quarter, odd, even
<b>NC requirements: Mental and written calculations (non-statutory guidance in italics)</b>	<ul style="list-style-type: none"> <li>Count in multiples of twos, fives and tens</li> <li>Solve one-step problems involving multiplication by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher</li> </ul>
<b>Representations to support mental and written calculations</b>	 <p>One bag holds 5 apples. How many apples do 4 bags hold?</p>
<b>Stem sentences</b>	There are ____ equal groups There are ____ in each group There are ____ equal groups of ____
<b>Teaching guidance</b>	<ul style="list-style-type: none"> <li>factor x factor = product</li> <li>Children represent multiplication as repeated addition in many different ways</li> <li>Children use concrete and pictorial representations to solve problems. They are not expected to record multiplication formally</li> </ul>
<b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b>	<ul style="list-style-type: none"> <li><i>Counting in twos, fives and tens from different multiples to develop their recognition of patterns in the number system</i></li> <li><i>Through grouping and sharing small quantities, pupils begin to understand multiplication and division; doubling numbers and quantities; and finding simple fractions of objects, numbers and quantities</i></li> <li><i>They make connections between arrays, number patterns, and counting in twos, fives and tens</i></li> </ul>

# Year 2 Multiplication

<p><b>Key Language</b></p>	<p>groups of, lots of, times, array, altogether, multiply, count, sharing, doubling, halving, multiplied by, repeated addition, column, row, commutative, sets of, groups, times as big as, once, twice, three times, factor, product</p>
<p><b>NC requirements: Mental and written calculations (non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Count in steps of 2,3 and 5 from 0, and in tens from any number forwards and backward</li> <li>• Recall and use multiplication facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers</li> <li>• Calculate mathematical statements for multiplication within the multiplication tables and write them using the multiplication (x) and equals (=) signs</li> <li>• Show that multiplication of two numbers can be done in any order (commutative)</li> <li>• Solve problems using multiplication using materials, arrays, repeated addition, mental methods, and multiplication facts, including problems in context</li> </ul>
<p><b>Representations to support mental and written calculations</b></p>	
<p><b>Stem sentences</b></p>	<p>There are ____ equal groups          There are ____ in each group          There are ____ equal groups of ____          If there are ____ equal groups, we can use the ____ times table          I can see 3 groups of 5 and I can see 5 groups of 3          3 times 5 can represent 3 groups of 5. It can also represent 3 times 5</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• factor x factor = product</li> <li>• Encourage daily counting in multiples both forwards and backwards</li> <li>• Use a number line or hundred square to support counting in multiples alongside concrete manipulatives</li> <li>• Look for patterns in the two times table, noticing even numbers and the pattern in the ones</li> <li>• Children are introduced to the multiplication symbol</li> <li>• Use arrays to teach children to understand the commutative law of multiplication, and give examples such as <math>3 \times \underline{\quad} = 6</math></li> </ul>

<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"><li>• <i>They count in multiples of three to support their later understanding of a third</i></li><li>• <i>Pupils use a variety of language to describe multiplication</i></li><li>• <i>Pupils are introduced to the multiplication tables. They practise to become fluent in the 2, 5 and 10 multiplication tables and connect them to each other. They connect the 10 multiplication table to place value, and the 5 multiplication table to the divisions on the clock face. They begin to use other multiplication tables and recall multiplication facts to perform written and mental calculations.</i></li><li>• <i>Pupils work with a range of materials and contexts in which division relates to grouping and sharing discrete and continuous quantities, to arrays and to repeated addition. They begin to relate these to fractions and measures (for example <math>40 \div 2 = 20</math>, 20 is a half of 40). They use commutativity and inverse relations to develop multiplicative reasoning (for example <math>4 \times 5 = 20</math> and <math>20 \div 5 = 4</math>)</i></li><li>• <i>Comparing measures includes simple multiples such as 'twice as wide'</i></li></ul>
---	--

# Year 3 Multiplication

## Key Language

groups of, lots of, times, array, altogether, multiply, count, sharing, doubling, halving, multiplied by, repeated addition, column, row, commutative, sets of, groups, times as big as, once, twice, three times, factor, product, partition, grid method, multiple, tens, ones, value, double, scaling

## National curriculum: Mental and written calculations (Non-statutory guidance in italics)

- Recall and use multiplication facts for the 3, 4 and 8 multiplication tables
- Write and calculate mathematical statements for multiplication using the multiplication tables that they know, including two-digit numbers times one-digit numbers using mental and progressing to formal written methods
- Solve problems, including missing number problems, involving multiplication, including positive integer scaling problems and correspondence problems in which  $n$  objects are connected to  $m$  objects
- *Pupils continue to practise their mental recall of multiplication tables when they are calculating mathematical statements in order to improve fluency. Trough doubling, they connect the 2, 4 and 8 multiplication tables*
- *Pupils develop efficient mental methods, for example using commutativity and associativity (for example  $4 \times 12 \times 5 = 4 \times 5 \times 12 = 20 \times 12 = 240$ ) and multiplication facts (for example, using  $3 \times 2 = 6$ ) to derive related facts (for example  $30 \times 2 = 60$ )*
- *Pupils develop reliable written methods for multiplication, starting with calculations of two-digit numbers by one-digit numbers and progressing to the formal written method of short multiplication*
- *Pupils solve simple problems in contexts. These include measuring and scaling contexts, (for example four times as high, eight times as long etc) and correspondence problems in which  $m$  objects are connected to  $n$  objects (for example, 3 hats and 4 coats, how many different outfits?)*

## Representations to support mental and written calculations

**Eg.  $23 \times 8 = 184$**

X	20	3
8	160	24

$160 + 24 = 184$

$3 \times 15 =$

15	15	15
?		

x	300	20	7
4	1200	80	28

$34 \times 5 = 170$

	H	T	O
		3	4
x			5
		2	
	1	7	0

		3	2	7
x			4	
	1	3	0	8

<p><b>Stem sentences</b></p>	<p>There are _____ equal groups  There are _____ in each group  There are _____ equal groups of _____  If there are _____ equal groups, we can use the ___ times table  I can see 3 groups of 5 and I can see 5 groups of 3  3 times 5 can represent 3 groups of 5. It can also represent 3 times 5  15 is equal to 10 plus 5. So 3 times 15 is equal to 3 times 10 plus 3 times 5  _____ multiplied by 10 is equal to _____  _____ is ten times the size of _____  First we multiply the ones, then we multiply the tens. We add those products together  If there are ten or more ones, then we must regroup the ones into 10s and 1s</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• factor x factor = product</li> <li>• Use the expanded column method first before moving onto the short multiplication method</li> <li>• Place value counters can be used to support the method rather than for calculating</li> <li>• Introduce the grid method with children making an array to represent the calculation then translate this to the grid method format</li> <li>• Children can move onto the short method if confident</li> <li>• Partition numbers into tens and ones and multiply multiples of ten by a single digit (eg 20 x 4) using their knowledge of multiplication facts and place value</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• <i>The comparison of measures includes simple scaling by integers (for example a given quantity or measure is twice as long or five times as high) and this connects to multiplication.</i></li> <li>• <i>Pupils understand and use simple scales (for example, 2, 5, 10 units per cm) in pictograms and bar charts with increasing accuracy.</i></li> </ul>

# Year 4 Multiplication

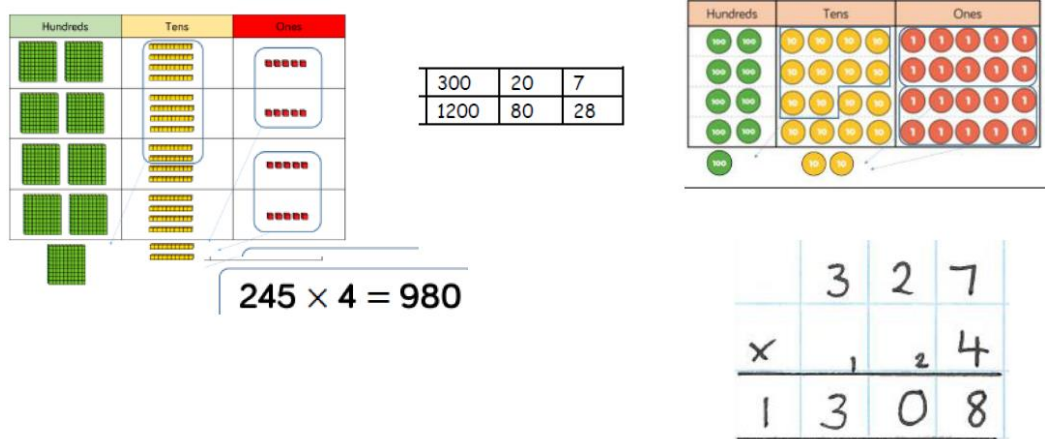

## Key Language

groups of, lots of, times, array, altogether, multiply, count, sharing, doubling, halving, multiplied by, repeated addition, column, row, commutative, sets of, groups, times as big as, once, twice, three times, factor, product, partition, grid method, multiple, tens, ones, value, scaling, short method, inverse

## NC requirements: Mental and written calculations (non- statutory guidance in italics)

- Recall multiplication facts for multiplication tables up to  $12 \times 12$
- Use place value, known and derived facts to multiply mentally, including multiplying by 0 and 1, and multiplying together three numbers
- Recognise and use factor pairs and commutativity in mental calculations
- Multiply two-digit and three-digit numbers by a one-digit number using formal written layout
- Solve problems involving multiplying and adding, including using the distributive law to multiply two-digit numbers by one digit, integer scaling problems and harder correspondence problems such as  $n$  objects are connected to  $m$  objects
- *Pupils continue to practise recalling and using multiplication tables to aid fluency*
- *Pupils practise mental methods and extend this to three-digit numbers to derive facts*
- *Pupils practise to become fluent in the formal written method of short multiplication with exact answers*
- *Pupils write statements about the equality of expressions (for example use the distributive law  $39 \times 7 = 30 \times 7 + 9 \times 7$  and associative law  $(2 \times 3) \times 4 = 2 \times (3 \times 4)$ ). They combine their knowledge of number facts and rules of arithmetic to solve mental and written calculations, for example  $2 \times 6 \times 5 = 10 \times 6 = 60$ .*
- *Pupils solve two-step problems in contexts, choosing the appropriate operation, working with increasingly harder numbers. This should include correspondence questions such as the numbers of choices of meal on a menu.*

## Representations to support mental and written calculations

**Stem sentences**

There are \_\_\_\_ equal groups. There are \_\_\_\_ in each group.  
 There are \_\_\_\_ equal groups of \_\_\_\_.  
 If there are \_\_\_\_ equal groups, we can use the \_\_\_\_ times table.  
 I can see 3 groups of 5 and 5 groups of 3.  
 3 times 5 can represent 3 groups of 5. It can also represent 3 times 5.  
 15 is equal to 10 plus 5. So 3 times 15 is equal to 3 times 10 plus 3 times 5  
 \_\_\_\_ multiplied by 10/100 is equal to \_\_\_\_.  
 \_\_\_\_ is ten/one hundred times the size of \_\_\_\_.  
 First we multiply the ones and then we multiply the tens. We add those products together.  
 If there are 10 or more ones, we must regroup the ones into 10s and 1s  
 If there are 10 or more tens, we must regroup the tens into 100s and 10s  
 If there are 10 or more hundreds, we must regroup the hundreds into 100s and 100s

**Teaching guidance**

- factor x factor = product
- When multiplying 4-digit numbers, place value counters are the best manipulatives to use to support children in their understanding
- If children are struggling with their tables, encourage the use of multiplication grids or lists so children can focus on the written method
- When multiplying a multidigit number by 2-digits. Use the area model to help children understand the size of the numbers they are using. This links to finding the area of a rectangle by finding the space covered by the Base 10.
- The grid method matches the area model as an initial written method before moving on to the formal written method

	<ul style="list-style-type: none"> <li>• Always preserve place value when calculating e.g. <math>32 \times 4</math> we are multiplying by 30 (not 3)</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Compare and order fractions whose denominators are all multiples of the same number</li> <li>• Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams</li> <li>• <i>Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division, building on work from previous years. This relates to scaling by fractions, including <math>&gt;1</math></i></li> <li>• Convert between different units of metric measure (for example kilometre and metre; centimetre and metre; centimetre and millimetre; gram and kilogram; litre and millilitre)</li> <li>• Calculate and compare the area of rectangles (including squares) and including using standard units, square centimetres (<math>cm^2</math>) and square metres (<math>m^2</math>) and estimate the area of irregular shapes</li> <li>• Estimate volume [for example using <math>1cm^3</math> blocks to build cuboids (including cubes)] and capacity [for example using water]</li> <li>• Solve problems converting units of time</li> <li>• Use multiplication to solve problems involving measure [for example length, mass, volume, money] using decimal notation, including scaling</li> <li>• <i>Pupils calculate the perimeter of rectangles and related composite shapes. Missing measures can be expressed algebraically, e.g. <math>4 + 2b = 20</math> for a rectangle of sides <math>2cm</math> and <math>b cm</math> and a perimeter of <math>20cm</math></i></li> <li>• <i>Pupils calculate the area from scale drawings using given measurements</i></li> <li>• <i>Pupils use multiplication in problems involving time and money, including conversions (for example days to weeks, expressing the answers as weeks and days)</i></li> </ul>

# Year 6 Multiplication

<p><b>Key Language</b></p>	<p>groups of, lots of, times, array, altogether, multiply, count, sharing, doubling, halving, multiplied by, repeated addition, column, row, commutative, sets of, groups, times as big as, once, twice, three times, factor, product, partition, grid method, multiple, tens, ones, value, scaling, short method, inverse, square, prime, integer, decimal</p>

<p><b>Stem sentences</b></p>	<p>_____ multiplied by 10/100 is equal to _____.</p> <p>_____ is ten/one hundred times the size of _____.</p> <p>To multiply a three-digit number by a two-digit number, first multiply by the ones, then the tens and then add them together.</p> <p>If there are 10 or more ones, we must regroup the ones into 10s and 1s</p> <p>If there are 10 or more tens, we must regroup the tens into 100s and 10s</p> <p>If there are 10 or more hundreds, we must regroup the hundreds into 100s and 100s</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• factor x factor = product</li> <li>• When multiplying 4-digits by 2-digits, children should be confident in the written method</li> <li>• If they are still struggling with times tables, provide multiplication grids or lists to support when they are focusing on the use of the method</li> <li>• Consider where exchanged digits are placed and make sure that this is consistent</li> <li>• When multiplying decimals. Line up the decimal points in the question and the answer. This works well for multiplying money and other measures.</li> <li>• The position of the subscript is flexible</li> </ul>

**Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)**

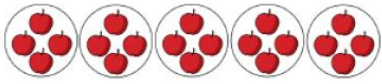

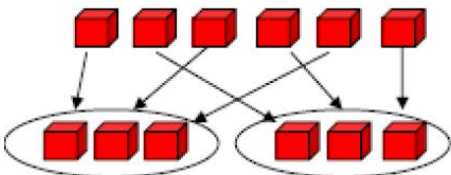

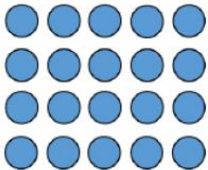

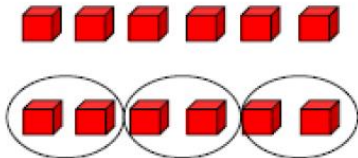

- Solve number and practical problems that involve numbers up to 10 000 000 and negative numbers
- Use common multiples to express fractions in the same denomination
- Multiply simple pairs of proper fractions, writing the answer in its simplest form [for example  $\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}$ ]
- Multiply numbers by 10, 100 and 1000 giving answers to three decimal places
- Multiply one-digit numbers with up to two decimal places by whole numbers
- Recall and use equivalences between simple fractions, decimals and percentages, including in different contexts
- *Pupils should use a variety of images to support their understanding of multiplication with fractions. This follows earlier work about fractions as operators (fractions of), as numbers, and as equal parts of objects., for example as parts of a rectangle.*
- *Pupils use their understanding of the relationship between unit fractions and division to work backwards by multiplying a quantity that represents a unit fraction to find the whole quantity [ for example if  $\frac{1}{4}$  of a length is 36cm, then the whole length is  $36\text{cm} \times 4 = 144\text{cm}$ ]*
- *Pupils multiply numbers with up to two decimal places by one-digit and two-digit whole number. Pupils multiply decimals by whole numbers starting with the simplest cases, such as  $0.4 \times 2 = 0.8$ , and in practical contexts such as money and measures.*
- Solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts
- *Pupils should consolidate their understanding of ratio when comparing quantities, sizes and scale drawings by solving a variety of problems. They might use the notation  $a:b$  to record their work*
- *Pupils solve problems using unequal quantities; for example, 'for every egg, you need three spoonful of flour.*
- Use simple formulae and express missing number problems algebraically using symbols and letters
- Solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places where appropriate
- Use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit and vice versa, using decimal notation to up to three decimal places
- Convert between miles and kilometres
- Recognise that shapes with the same areas can have different perimeters and vice versa
- Recognise when it is possible to use formulae for area or volume of shapes
- Calculate the area of parallelograms and triangles
- Calculate, estimate and compare volumes of cubes and cuboids using standard units including cubic centimetres ( $\text{cm}^3$ ) and cubic metres ( $\text{m}^3$ ) and extending to other units [ for example  $\text{mm}^3$  and  $\text{km}^3$ ]
- Know the diameter of a circle is twice the radius
- *They should connect conversion from kilometres to miles in measurement to its graphical representation*

**guidance in italics)**

*example  $40 \div 2 = 20$ , 20 is a half of 40). They use commutativity and inverse relations to develop multiplicative reasoning (for example  $4 \times 5 = 20$  and  $20 \div 5 = 4$ )*

- Recognise, find, name and write fractions  $\frac{1}{3}$   $\frac{1}{4}$   $\frac{2}{4}$  and  $\frac{3}{4}$  of a length, shape, set of objects or quantity
- Write simple fractions for example  $\frac{1}{2}$  of  $6 = 3$
- *Pupils use fractions as 'fractions of' discrete and continuous quantities by solving problems using shapes, objects and quantities. They connect unit fractions to equal sharing and grouping, to numbers, when they can be calculated, and to measures, finding fractions of lengths, quantities, sets of objects or shapes.*
- *Comparing measures includes simple multiples such as 'half as high'*

# Year 3 Division

## Key Language

dividend, divisor, quotient, one each, two each, group, groups of, lots of, array, divide, divided by, division, grouping, sharing, remainder, inverse, short division, multiple

## National Curriculum requirements (Non-statutory notes and guidance in italics)

- Recall and use division facts for the 3, 4 and 8 times tables
- Write and calculate mathematical statements for division using the multiplication tables that they know, including two-digit numbers times on-digit numbers using mental and progressing to formal written method
- Solve problems, including missing number problems, involving division, including positive integer scaling problems and correspondence problems in which  $n$  objects are connected to  $m$  objects
- Pupils develop efficient mental methods using division facts (for example, using  $6 \div 3 = 2$ ,  $2 = 6 \div 3$ ) to derive related facts (for example  $60 \div 3 = 20$  and  $20 = 60 \div 3$ )*
- Pupils develop reliable written methods for division, progressing to the formal written method of short division*
- Pupils solve simple problems in contexts. These include measuring and scaling contexts and correspondence problems in which  $m$  objects are connected to  $n$  objects (for example 12 sweets shared equally between 4 children, 4 cakes shared equally between 6 children)*

## Representations to support mental and written calculations

## Stem sentences

6 divided between 2 is equal to 3 each  
 6 shared into 2 equal groups – there are 3 in each group  
 6 is the dividend, 2 is the divisor, 3 is the quotient  
 $13 \div 4$  13 is divided into groups of 4. There are 3 groups and a remainder of 1.  
 13 divided into groups of 4 is equal to 3 remainder 1  
 The remainder is always less than the divisor  
 If the dividend is not a multiple of the divisor, there is a remainder

<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• Dividend ÷ divisor = quotient</li> <li>• When dividing numbers involving an exchange, children can use base 10 and place value counters to exchange one ten for ten ones.</li> <li>• Children should start with the equipment outside of the place value grid before sharing the tens and ones equally between the rows</li> <li>• Flexible partitioning in a part whole model supports this method</li> <li>• When introducing short division, limit numbers to no remainders, then limit numbers to no remainders in the final answer but with remainders occurring within the calculation</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Count up and down in tenths; recognise that tenths arise from dividing an object into 10 equal parts and in dividing one-digit numbers or quantities by 10</li> <li>• Recognise, find and write fractions of a discrete set of objects</li> <li>• <i>Pupils connect tenths to place value, decimal measures and division by 10</i></li> <li>• <i>Pupils understand the relation between unit fractions as operators (fractions of), and division by integers</i></li> <li>• <i>They continue to recognise unit fractions as a division of quantity</i></li> </ul>

# Year 4 Division

## Key Language

dividend, divisor, quotient, one each, two each, group, groups of, lots of, array, divide, divided by, division, grouping, sharing, remainder, inverse, short division, multiple, divisible by, factor

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- Recall division facts for multiplication tables up to  $12 \times 12$
- Use place value, known and derived facts to multiply mentally, including dividing by 1
- Pupils continue to practise recalling and using multiplication tables and to aid fluency*
- Pupils practise mental methods and extend this to three-digit numbers to derive facts, for example  $(600 \div 3 = 200)$  can be derived from  $2 \times 3 = 6$*
- Pupils practise to become fluent in the formal written method of short division with exact answers*
- Pupils solve two-step problems in contexts, choosing the appropriate operation, working with increasingly harder numbers. This should include correspondence questions such as three cakes shared equally between 10 children*

## Representations to support mental and written calculations

$52 \div 4 = 13$   
 $53 \div 4 = 13 \text{ r}1$

$3 \overline{) 32} = 10 \text{ r}2$

$4 \overline{) 72} = 18$

$4 \overline{) 872} = 218$

## Stem sentences

6 divided between 2 is equal to 3 each  
 6 shared into 2 equal groups – there are 3 in each group  
 6 is the dividend, 2 is the divisor, 3 is the quotient  
 $13 \div 4$  13 is divided into groups of 4. There are 3 groups and a remainder of 1.  
 13 divided into groups of 4 is equal to 3 remainder 1  
 The remainder is always less than the divisor  
 If the dividend is not a multiple of the divisor, there is a remainder  
 \_\_\_\_\_ divided by 10 is equal to \_\_\_\_\_  
 \_\_\_\_\_ is ten times smaller than \_\_\_\_\_  
 $84 \div 4 = 21$  8 tens divided between 4 is equal to 2 tens each. 4 ones divided between 4 is equal to 1 each. 8 tens and 4 ones divided between 4 is equal to 2 tens and 1 one, which is 21 (Partitive)

	<p><math>84 \div 4 = 21</math> 8 tens are divided into groups of 4. There are 2 groups. 4 ones are divided into groups of 4. There is 1 group. 2 groups of ten and 1 one is 21. The quotient is 21 (Quotitive)</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• Dividend <math>\div</math> divisor = quotient</li> <li>• Use partitioning to support mental calculation e.g. 56</li> <li>• Use partitioning to support mental calculation e.g. <math>56 \div 4 = 40 \div 4</math> and <math>16 \div 4</math></li> <li>• Only use short division beyond the twelfth multiple</li> <li>• When dividing numbers involving an exchange, children can use Base 10 and place value counters to exchange one ten for ten ones</li> <li>• Children should start with the equipment outside of the place value grid before sharing the tens and ones equally between the rows</li> <li>• Flexible partitioning in a part whole model supports this method</li> <li>• When using the short division method, children use grouping. Starting with the largest place value, they group by the divisor</li> <li>• Language is important here. Children should consider ‘How many groups of 4 tens can we make?’ and ‘How many groups of 4 ones can we make?’</li> <li>• Remainders can also be seen as they remain ungrouped</li> <li>• Children who are confident can move onto dividing a 3-digit number by a 1-digit number</li> <li>• Children can continue to use place value counters to share 3 digit numbers into equal groups. This method can also help to highlight remainders. Flexible partitioning in a part-whole model supports this method</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Recognise that hundredths arise when dividing an object by one hundred and dividing tenths by ten</li> <li>• Solve problems involving increasingly harder fractions to calculate quantities., and fractions to divide quantities, including non-unit fractions where the answer is a whole number</li> <li>• Find the effect of dividing a one- or two-digit number by 10 and 100, identifying the value of digits in the answer as ones, tenths and hundredths</li> <li>• <i>Pupils understand the relationship between non-unit fractions and multiplication and division of quantities, with particular emphasis on tenths and hundredths</i></li> <li>• <i>Pupils are taught throughout that fractions and decimals are different ways of expressing numbers and proportions</i></li> <li>• <i>Pupils’ understanding of the number system and decimal place value is extended at this stage to tenths and then hundredths. This includes relating the decimal notation to division of a whole number by 10 and later 100</i></li> <li>• Convert between different units of measure [for example, kilometres to metres, hour to minute]</li> <li>• Solve problems involving converting from hours to minutes; minutes to seconds; years to months; weeks to days</li> </ul>

# Year 5 Division

## Key Language

dividend, divisor, quotient, one each, two each, group, groups of, lots of, array, divide, divided by, division, grouping, sharing, remainder, inverse, short division, multiple, divisible by, factor, prime number, prime factor, composite number (not prime)

## NC requirements: Mental and written calculations (non-statutory guidance in italics)

- Identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers
- Know and use vocabulary of prime numbers, prime factors and composite (non-prime) numbers
- Establish whether a number up to 100 is prime and recall prime numbers up to 19
- Divide numbers mentally drawing upon known facts
- Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context
- Divide whole numbers and those involving decimals by 10, 100 and 1000
- Solve problems involving division including using their knowledge of factors and multiples, squares and cubes
- Solve problems involving division, including scaling by simple fractions and problems involving simple rates
- *Pupils practise and extend their use of the formal written methods of short division. They apply all the multiplication tables and related division facts, commit them to memory and use them confidently to make larger calculation*
- *They understand the terms factor, multiple and prime, square and cube numbers*
- *Pupils interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders as fractions, as decimals or by rounding (for example  $98 \div 4 = \frac{98}{4} = 24 \text{ r}2 = 24\frac{1}{2} = 24.5 \approx 25$ )*
- *Pupils use multiplication and division as inverses to support the introduction of ratio in Year 6, for example, by multiplying and dividing powers of 10 in scale drawings or by multiplying and dividing by powers of a 1000 in converting between units such as kilometres and metres*
- *They understand the terms factor, multiple and prime, square and cube numbers and use them to construct equivalence*
- *Pupils use and explain the equals sign to indicate equivalence, including in missing number problems*

|--|---|

# Year 6 Division

## Key Language

dividend, divisor, quotient, one each, two each, group, groups of, lots of, array, divide, divided by, division, grouping, sharing, remainder, inverse, short division, multiple, divisible by, factor, prime number, prime factor, composite number (not prime), common factor

## NC requirements: Mental and written calculations (non- statutory guidance in italics)

- Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret the remainders as whole number remainders, fractions, or by rounding, as appropriate for the context
- Divide numbers up to 4 digits by a two-digit whole number using the formal written method of short division, interpreting remainders to the context
- Perform mental calculations, including with mixed operations and large numbers
- Identify common factors, common multiples and prime numbers
- Use their knowledge of the order of operations to carry out calculations involving the four operations
- Use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy
- *Pupils practise division for larger numbers using short and long division*
- *Pupils continue to use all multiplication tables to calculate mathematical statements in order to maintain their fluency*
- *Pupils explore the order of operations using brackets*
- *Common factors can be related to finding equivalent fractions*

## Representations to support mental and written calculations

$$432 \div 12 = 36$$

		0	3	6
	12	4	43	72

		0	3	6
1	2	4	3	2
	-	3	6	0
			7	2
	-		7	2
				0

(x30)  
(x6)

$$7,335 \div 15 = 489$$

		0	4	8	9
15	7	3	3	5	
-	6	0	0	0	(x400)
	1	3	3	5	
-	1	2	0	0	(x80)
		1	3	5	
-		1	3	5	(x9)
				0	

- 1 x 15 = 15
- 2 x 15 = 30
- 3 x 15 = 45
- 4 x 15 = 60
- 5 x 15 = 75
- 10 x 15 = 150

$$372 \div 15 = 24 \text{ r}12$$

$$372 \div 15 = 24 \frac{4}{5}$$

		2	4	r	1	2
1	5	3	7	2		
-		3	0	0		
			7	2		
-			6	0		
			1	2		

1 x 15 = 15  
2 x 15 = 30  
3 x 15 = 45  
4 x 15 = 60  
5 x 15 = 75  
10 x 15 = 150

			2	4	$\frac{4}{5}$
1	5	3	7	2	
-		3	0	0	
			7	2	
-			6	0	
			1	2	

$$\begin{array}{r} 0812.125 \\ 8 \overline{)6497.000} \end{array}$$

<p><b>Stem sentences</b></p>	<p>6 divided between 2 is equal to 3 each          6 shared into 2 equal groups – there are 3 in each group          6 is the dividend, 2 is the divisor, 3 is the quotient  <math>13 \div 4</math> 13 is divided into groups of 4. There are 3 groups and a remainder of 1.          13 divided into groups of 4 is equal to 3 remainder 1          The remainder is always less than the divisor          If the dividend is not a multiple of the divisor, there is a remainder          _____ divided by 10 is equal to _____          _____ is ten times smaller than _____  <math>84 \div 4 = 21</math> 8 tens divided between 4 is equal to 2 tens each. 4 ones divided between 4 is equal to 1 each. 8 tens and 4 ones divided between 4 is equal to 2 tens and 1 one, which is 21 (Partitive)  <math>84 \div 4 = 21</math> 8 tens are divided into groups of 4. There are 2 groups. 4 ones are divided into groups of 4. There is 1 group. 2 groups of ten and 1 one is 21. The quotient is 21 (Quotitive)  <math>342 \div 3</math> 3 hundreds divided by 3 is 1 hundred. 4 tens divided by 3 is 1 group of 10 remainder 1 ten. Exchange 1 ten for 10 ones. 12 ones divided by 3 is equal to 4. (Quotative)</p>
<p><b>Teaching guidance</b></p>	<ul style="list-style-type: none"> <li>• Dividend <math>\div</math> divisor = quotient</li> <li>• When children begin to divide up to 4-digits by 2-digits, written methods become the most accurate as concrete and pictorial representations become less effective</li> <li>• Children can write out multiples to support their calculations with larger remainders</li> <li>• Children need to consider the meaning of the remainder and how to express it, with a fraction, a decimal, a rounded (up or down) number or a value</li> </ul>
<p><b>Links to other strands of Maths National Curriculum (including non-statutory guidance in italics)</b></p>	<ul style="list-style-type: none"> <li>• Solve number and practical problems that involve numbers up to 10 000 000 and negative numbers</li> <li>• Use common factors to simplify fractions</li> <li>• Divide proper fractions by whole numbers [for example <math>\frac{1}{3} \div 2 = \frac{1}{6}</math>]</li> <li>• Associate a fraction with division and calculate decimal fraction equivalents [for example 0.375] for a simple fraction [for example <math>\frac{3}{8}</math>]</li> <li>• Divide numbers by 10, 100 and 1000, giving answers to three decimal places</li> <li>• Use written division methods in cases where the answer has up to two decimal places</li> <li>• Recall and use equivalences between simple fractions, decimals and percentages, including in different contexts</li> <li>• <i>Pupils use their understanding of the relationship between unit fractions and division to work backwards by multiplying a quantity that represents a unit fraction to find the whole quantity [for example if <math>\frac{1}{4}</math> of a length is 36cm, then the whole length is <math>36\text{cm} \times 4 = 144\text{cm}</math>]</i></li> <li>• <i>Pupils can explore and make conjectures about converting a simple fraction to a decimal fraction [for example <math>3 \div 8 = 0.375</math>]</i></li> <li>• <i>Pupils divide numbers with up to two decimal places by one-digit and two-digit whole numbers</i></li> <li>• <i>Pupils are introduced to the division of decimal numbers by one-digit whole number, initially, in practical contexts involving measures and money. They recognise division calculations as the inverse of multiplication.</i></li> <li>• Solve problems involving the relative sizes of two quantities where missing values can be found by using larger integer multiplication and division facts</li> </ul>
